Hi, I have taken top 25 websites of Alexa using the link <https://www.alex.com/topsites> and set of websites is as followed:

[www.google.com','www.youtube.com','www.tmall.com','www.baidu.com','www.qq.com','www.sohu.com','www.facebook.com','www.taobao.com','www.360.cn','www.jd.com','www.amazon.com','www.yahoo.com','www.wikipedia.org','www.weibo.com','www.sina.com.cn','www.zoom.us','www.xinhuanet.com','www.live.com','www.netflix.com','www.Reddit.com','www.microsoft.com','www.instagram.com','www.office.com','www.google.com.hk','www.panda.tv']

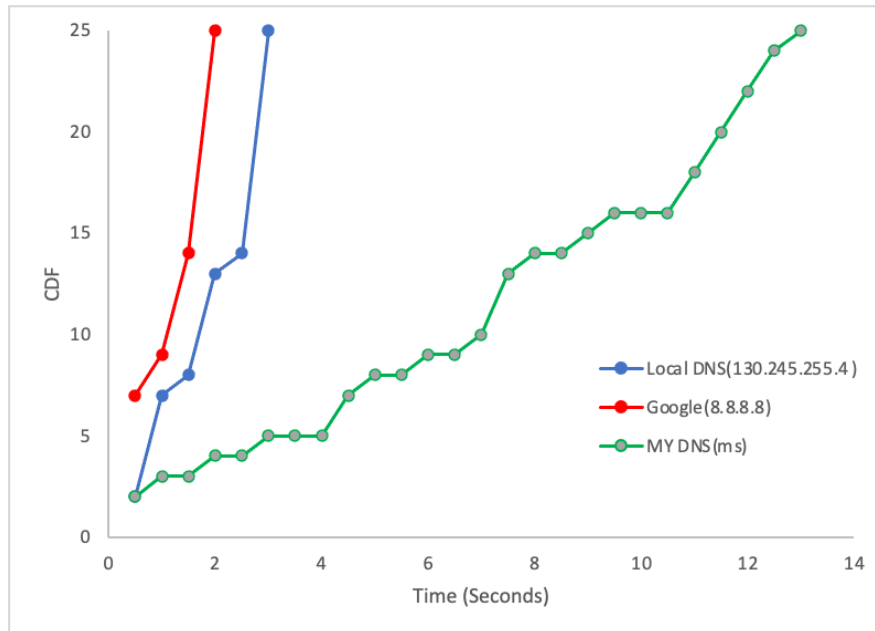

I have queried each of the websites 10 times and calculated the average time using the PartA Dns Resolver, local dns resolver (130.245.255.4), dns resolver using @8.8.8.8 (Google dns resolver).

The average time taken for each of the website when queried 10 times is :

Website	MY DNS(in ms)	Local DNS(130.245.255.4) in ms	Google(8.8.8.8) in ms
www.google.com	69	20	15
www.youtube.com	120	30	14
www.tmall.com	510	480	125
www.baidu.com	1220	12	8
www.qq.com	901	25	27
www.sohu.com	1440	400	192
www.facebook.com	101	12	6
www.taobao.com	505	500	470
www.360.cn	680	202	100
www.jd.com	1010	40	50
www.amazon.com	600	25	13
www.yahoo.com	110	11	6
www.wikipedia.org	143	22	12
www.weibo.com	570	300	232
www.sina.com	810	500	464
www.zoom.us	300	18	14
www.xinhuanet.com	1520	18	16
www.live.com	152	10	7
www.netflix.com	421	12	6
www.reddit.com	105	12	6

www.microsoft.com	470	20	13
www.instagram.com	140	22	15
www.office.com	195	11	10
www.google.com.hk	320	20	12
www.panda.tv	570	210	83

I use Microsoft Excel to generate the CDF distribution of the data and CDF distribution of the data is as follows:

The time taken by DNS resolver is very high in comparison with local DNS resolver and Google DNS resolver. Initial 7 websites querying through google DNS is very low and hence is not being seen in CDF of Google DNS.
